

## Large Capacity Solids Separators

### Easy, Effective Compliance

Trapzilla® products provide easy, effective compliance for food facility sites meeting today's stricter utility requirements. Trapzilla® is ideal for downtown, strip-shopping center, mall food court and other sites having limited space and strict sewer utility requirements.

### The Supercapacity Grease Interceptor

Trapzilla® grease traps hold up to **425% more grease** than conventional grease traps of the same GPM size. This provides the safety factor so important to sewer utilities and restaurant operators. Trapzilla® is easy to service, too. Your community's pumping contractor can quickly pump a Trapzilla and not interfere with your restaurant's business.

### Trapzilla® Solids Separators

The Trapzilla Solids Separator (TSS) separates and collects all sizes of incidental solids. Designed to collect incidental solids in a central location, the TSS is installed upstream of the Trapzilla Grease Interceptor. Two convenient sizes are available: the TSS-70 stores 70 gal. (265 L) of solids while the TSS-95 stores 95 gal. (360 L) of solids.

### Other Advantages

Trapzilla's compact design and available options allow installation into more than 90% of Food Service Establishment facilities. You can install the Trapzilla grease interceptors and solids separators inside in the floor, outside in the ground, between floors, above the floor and you can easily configure systems with one, two or four Trapzilla units for additional capacity. For high-volume full-service restaurant sites in tight, downtown locations designers can choose to team a high capacity Trapzilla Solids Separator ahead of a Trapzilla Grease Separator.

Trapzilla units are lightweight and can be easily carried and installed by a plumber and his helper. Trapzilla fits through most commercial doorways and down most commercial facility staircases. Find more information on the website at [www.trapzilla.com](http://www.trapzilla.com).

Trapzilla® TSS-95-ECA Solids Interceptor installed before a TZ-600-ECA Grease Interceptor

## Trapzilla® Solids Separators

### TSS-70-ECA • TSS-70-SSA • TSS-70

75 GPM (4.73 l/s)

- Construction: Rotationally Molded Polyethylene
- Solids Retention Capacity: 70 Gal. (265 L)
- 4" Inlet/Outlet (100 mm)

### TSS-95-ECA • TSS-95-SSA • TSS-95

150 GPM (9.46 l/s)

- Construction: Rotationally Molded Polyethylene
- Solids Retention Capacity: 95+ Gal. (360 L)
- 4" Inlet/Outlet (100 mm)\*

\* 6" Inlet/Outlet Available on TSS-95 Models Only

# How Does a Trapzilla® Solids Separator Work?

Solids-laden effluent from the kitchen flow is slowed and forced downward in a vertical baffle, where solids filter out of the flow and sink to the solids storage area. The “cleaned” effluent flows through the outlet. Pumping the Trapzilla Solids Separator is easy - the pumper removes the lid cover and vacuums out the solids.

\* ECA models have built-in extension collar. Additional extension collars may be installed to meet installation depth.

**Trapzilla**

## Key Benefits

- Constructed of corrosion-resistant, linear low-density polyethylene.
- Compact Footprint
- Easy to Pump
- Installation Flexibility
